Special Issue on  Energy and Global Warming

Call for Papers

Addressing the effects of global warming is one of the top priorities of the Energy Department. The 2013 Fifth Assessment Report (AR5) by the Intergovernmental Panel on Climate Change (IPCC) of the United Nations indicated that most of the observed warming over the last 50 years was likely to have been due to the increasing concentrations of greenhouse gases produced mainly by the use of fossil fuels. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in the area of energy and global warming.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring energy and global warming. In this special issue, potential topics include, but are not limited to:

- Energy and greenhouse gas emissions
- Energy security
- Renewable and low carbon energy
- Energy efficiency
- Energy sustainability

Authors should read over the journal’s For Authors carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal’s Paper Submission System.

Please kindly specify the “Special Issue” under your manuscript title. The research field “Special Issue - Energy and Global Warming” should be selected during your submission.
