Special Issue on Plant Genetics

Call for Papers

Plant development is the process of a plant changing from one growth stage to another. This could be the development of tillers on a grass plant or flower buds on a legume plant. Plant development is the major factor affecting forage quality. Plants change from vegetative to reproductive stages, forage quality decreases. When in the reproductive stage, both grasses and legumes produce. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in this area of Plant Genetics.

In this special issue, we invite front-line researchers and authors to submit original research and review articles that explore Plant Genetics. In this special issue, potential topics include, but are not limited to:

- Single–gene inheritance
- Independent assortment of genes
- Mapping eukaryotic chromosomes by recombination
- Gene interaction
- DNA structure and replication
- Proteins and their synthesis

Authors should read over the journal’s For Authors carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal’s Paper Submission System.

Please kindly specify the “Special Issue” under your manuscript title. The research field “Special Issue - Plant Genetics” should be selected during your submission.

Special Issue timetable:

<table>
<thead>
<tr>
<th>Submission Deadline</th>
<th>November 28th, 2019</th>
</tr>
</thead>
<tbody>
<tr>
<td>Publication Date</td>
<td>January 2020</td>
</tr>
</tbody>
</table>
