Special Issue on

Agricultural Quality Standards and Testing Technology

Call for Papers

In developed countries, quality control measures to ensure that food products meet certain safety and quality standards play a key role in agricultural processing. These measures include testing for bacterial contamination, measuring the amount of fat, protein, and other nutrients, and inspecting plants, livestock, and production facilities. However, food quality control in agricultural value chains in developing countries, where agricultural production tends to be dominated by smallholder farmers, presents particular challenges. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in this area of agricultural quality standards and testing technology.

In this special issue, we invite front-line researchers and authors to submit original research and review articles that explore agricultural quality standards and testing technology. In this special issue, potential topics include, but are not limited to:

- Quality and safety of agricultural products
- Agricultural monitoring technology
- Quality and safety of meat and egg
- Quality and safety of fruit and vegetables
- Quality management of agricultural products
- Agricultural quality standards

Authors should read over the journal’s For Authors carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal’s Paper Submission System.

Please kindly specify the “Special Issue” under your manuscript title. The research field “Special Issue - Agricultural Quality Standards and Testing Technology Sciences” should be selected during your submission.
