Special Issue on Agricultural Ecological

Call for Papers

The practice of ecological agriculture involves building the strengths of natural ecosystems into agroecosystems, purposely disturbed to produce food and fiber. The overall strategies include using practices that (a) grow healthy plants with good defense capabilities, (b) stressing pests, and (c) enhancing populations of beneficial organisms. These are accomplished by enhanced habitat management both above ground and in the soil. Many of the practices that contribute to the overall strategies are well known—such as intensive use of cover crops or reduced tillage. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in this area of agricultural ecological.

In this special issue, we invite front-line researchers and authors to submit original research and review articles that explore agricultural ecological. In this special issue, potential topics include, but are not limited to:

- The benefits or ecological farming
- Ecological crop and soil management
- Grow healthy plants with good defense capabilities
- Enhance beneficial organisms
- Agricultural waste disposal
- Ecological principles for agriculture

Authors should read over the journal’s For Authors carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal’s Paper Submission System.

Please kindly specify the “Special Issue” under your manuscript title. The research field “Special Issue - Agricultural Ecological” should be selected during your submission.

Special Issue timetable:

<table>
<thead>
<tr>
<th>Submission Deadline</th>
<th>October 23rd, 2019</th>
