Special Issue on

Advanced Modeling and Simulation in Engineering

Call for Papers

Modeling and simulation is widely found application in the field of engineering. The methods, tools, and techniques allow effectively analyzing and evaluation design alternatives by avoiding risks, costs and fails associated with extensive field experimentation. The goal of this Special Issue is to provide a platform for scientists worldwide to promote, share, and discuss various new issues and developments in the area of modeling and simulation in engineering.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring advanced modeling and simulation in engineering. Potential topics include, but are not limited to:

- Analysis and computational methods in engineering
- Computation fluid dynamics
- Dynamic modeling and simulation
- Process modeling and simulation
- Various engineering system control and simulation
- Optimization of engineering systems

Authors should read over the journal’s For Authors carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal’s Paper Submission System.

Please kindly specify the “Special Issue” under your manuscript title. The research field “Special Issue - Advanced Modeling and Simulation in Engineering” should be selected during your submission.
