Special Issue on Geological Environment

Call for Papers

Environmental geology, field concerned with applying the findings of geologic research to the problems of land use and civil engineering. It is closely allied with urban geology and deals with the impact of human activities on the physical environment (e.g., contamination of water resources by sewage and toxic chemical wastes). Other important concerns of environmental geology include reclaiming mined lands; identifying geologically stable sites for constructing buildings, nuclear power plants, and other facilities; and locating sources of building materials, such as sand and gravel. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in the area of Geological Environment.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring Geological Environment. In this special issue, potential topics include, but are not limited to:

- Managing geological and hydrogeological resources
- Earth's surface
- Geomorphology, and edaphology
- Mitigating exposure of natural hazards on humans
- Managing industrial and domestic waste disposal
- Importance of environmental geology

Authors should read over the journal’s For Authors carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal’s Paper Submission System.

Please kindly notice that the “Special Issue” under your manuscript title is supposed to be specified and the research field “Special Issue - Geological Environment” should be chosen during your submission.

According to the following timetable:

<table>
<thead>
<tr>
<th>Submission Deadline</th>
<th>July 25th, 2019</th>
</tr>
</thead>
<tbody>
<tr>
<td>Publication Date</td>
<td>September 2019</td>
</tr>
</tbody>
</table>
