Special issue on Obesity

Call for Papers

**Obesity** is a medical condition in which excess body fat has accumulated to the extent that it may have an adverse effect on health, leading to reduced life expectancy and/or increased health problems. People are considered as obese when their body mass index (BMI), a measurement obtained by dividing a person's weight in kilograms by the square of the person's height in metres, exceeds 30 kg/m².

Obesity increases the likelihood of various diseases, particularly heart disease, type 2 diabetes, obstructive sleep apnea, certain types of cancer, and osteoarthritis. Obesity is most commonly caused by a combination of excessive food energy intake, lack of physical activity, and genetic susceptibility, although a few cases are caused primarily by genes, endocrine disorders, medications or psychiatric illness. Evidence to support the view that some obese people eat little yet gain weight due to a slow metabolism is limited; on average obese people have a greater energy expenditure than their thin counterparts due to the energy required to maintain an increased body mass.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring **Obesity**.

Authors should read over the journal’s **Author Guidelines** carefully before submission, Prospective authors should submit an electronic copy of their complete manuscript through the journal **Paper Submission System**.

Please kindly notice that the “**Special Issue**” under your manuscript title is supposed to be specified and the research field “**Obesity**” should be chosen during your submission.

According to the following timetable:

<table>
<thead>
<tr>
<th>Manuscript Due</th>
<th>November 15th, 2012</th>
</tr>
</thead>
<tbody>
<tr>
<td>Publication Date</td>
<td>December, 2012</td>
</tr>
</tbody>
</table>

**Editors-in-Chief**

Prof. James J. Chou Harvard Medical School, USA
