Special Issue on

Dynamic Stochastic General Equilibrium

Call for Papers

Dynamic stochastic general equilibrium model (DSGE) is one branch of general equilibrium theory. The DSGE methodology is used to explain aggregate economic phenomena, such as economic growth, business cycles, Monetary policy formulation and so on. Given that the DSGE model has weaknesses in incomplete financial markets and labor markets, these aspects need to be improved in the next few years.

In this special issue, we intend to invite front-line researchers and authors to submit original researches and review articles on exploring dynamic stochastic general equilibrium. Potential topics include, but are not limited to:

- Decomposing risk in DSGE models
- Practical significance in DSGE models for economy
- Describe the properties of DSGE models
- Dynamic identification of parameters in DSGE models
- The overall structure characteristics of the DSGE models
- Computation of optimal policy in DSGE models

Authors should read over the journal’s For Authors carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal’s Paper Submission System.

Please kindly notice that the “Special Issue” under your manuscript title is supposed to be specified and the research field “Special Issue – Dynamic Stochastic General Equilibrium” should be chosen during your submission.

According to the following timetable:

<table>
<thead>
<tr>
<th>Submission Deadline</th>
<th>April 3rd, 2018</th>
</tr>
</thead>
<tbody>
<tr>
<td>Publication Date</td>
<td>June 2018</td>
</tr>
</tbody>
</table>
