Special Issue on Biodiversity and Ecological Protection

Call for Papers

Biodiversity refers to the variety of life on Earth at all its levels, from genes to ecosystems, and the ecological and evolutionary processes that sustain it. Biodiversity includes not only species we consider rare, threatened, or endangered, but every living thing—even organisms we still know little about, such as microbes, fungi, and invertebrates. Biodiversity is important everywhere; species and habitats in your area as well as those in distant lands all play a role in maintaining healthy ecosystems. As one of the most important and timely research fields of human life, biodiversity and ecological protection is of great attraction to researchers.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on Biodiversity and Ecological Protection. Potential topics include, but are not limited to:

- Biodiversity and ecosystem services
- Measurements and biotechnology
- Genetic diversity
- Protection and restoration techniques
- Biodiversity and environmental and climate changes
- Threats to biodiversity
- Human influence on biodiversity
- Biodiversity and agriculture
- Conservation management and protected areas
- Conservation strategies and economic values
- Biodiversity, business and industry

Authors should read over the journal’s For Authors carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal’s Paper Submission System.

Please kindly notice that the “Special Issue” under your manuscript title is supposed to be specified and the research field “Special Issue – Biodiversity and Ecological Protection” should be chosen during your submission.

According to the following timetable:

| Submission Deadline | October 31st, 2018 |
