Special Issue on Geomorphology and Topography

Call for Papers

Geomorphology is a science that studies the characteristics, distribution, formation and evolution of topography and landscape on the earth's surface. It emphasizes the process of spatial and temporal evolution, and is an interdisciplinary subject related to geology, geography and climatology. Since the mid twentieth Century, geomorphology widely absorbing the theories and methods of other disciplines, and focus on the observation and analysis of the modern geomorphic process, has made considerable progress. The geomorphology has formed the tectonic geomorphology, climate, geomorphology, dynamic geomorphology and many other branches of applied geomorphology. Study of geomorphology for construction, agricultural production, mineral exploration, natural disaster prevention and environmental protection has practical significance.

In this special issue, we intend to invite front-line researchers and authors to submit original researches and review articles on exploring geomorphology and topography. Potential topics include, but are not limited to:

- Evolution of geomorphology
- Dynamic geomorphology
- Morphotectonics
- Climatic geomorphology
- Paleo geomorphology
- Petrographic geomorphology
- Artificial geomorphology
- Geomorphologic mapping technology
- Geomorphologic processes and global environment

Authors should read over the journal’s For Authors carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal’s Paper Submission System.

Please kindly notice that the “Special Issue” under your manuscript title is supposed to be specified and the research field “Special Issue – Geomorphology and Topography” should be chosen during your submission.

According to the following timetable:

<table>
<thead>
<tr>
<th>Submission Deadline</th>
<th>March 16th, 2020</th>
</tr>
</thead>
<tbody>
<tr>
<td>Publication Date</td>
<td>May 2020</td>
</tr>
