Special Issue on Metal Complexes

Call for Papers

Metal complexes have been developed rapidly in recent years. Metal complexes have adverse applications such as in waste water treatment for metal recovery, protective coatings, thermally stable materials, water disinfectants, antifouling paints, antimicrobial and surgical materials, gels and ointments for medical uses, and biological activity.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring Metal Complexes. Potential topics include, but are not limited to:

- Coordination chemistry
- Organometallic and catalytic chemistry
- Metal complexes and ligands
- The kinetics and mechanism of formation of metal complexes
- Novel metals and metal complexes for cancer therapy
- Properties and structures of metal complexes
- Hydrometallurgy and extraction
- Metal complexes as catalysts
- Metal complexes for medicine and biology

Authors should read over the journal’s For Authors carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal’s Paper Submission System.

Please kindly specify the “Special Issue” under your manuscript title. The research field “Special Issue - Metal Complexes” should be selected during your submission.
