Special Issue on Patient Care and Nursing

Call for Papers

Patient safety is an essential and vital component of quality nursing care. Patient safety is an essential and vital component of quality care. Yet health care providers face many challenges in today’s health care environment in trying to keep patients safe. Doctors are perceived by patients and clinicians-as being the captain of the health care team, with good reason. But, physicians may spend only 30 to 45 minutes a day with even a critically ill hospitalized patient, whereas nurses are a constant presence at the bedside and regularly interact with physicians, pharmacists, families, and all other members of the health care team. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in this area of patient care and nursing.

In this special issue, we invite front-line researchers and authors to submit original research and review articles that explore patient care and nursing. In this special issue, potential topics include, but are not limited to:

- Diabetes care
- Cancer patient care
- Cerebral hemorrhage patients nursing
- Cerebral palsy patient care
- Cancer patient care
- Surgery patient care

Authors should read over the journal’s For Authors carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal’s Paper Submission System.

Please kindly specify the “Special Issue” under your manuscript title. The research field “Special Issue - Patient Care and Nursing” should be selected during your submission.

Special Issue timetable:

<table>
