Special Issue on Uterine Diseases

Call for Papers

The uterus, or womb, is an important female reproductive organ. It is the place where the fetus develops when a woman is pregnant. Uterine diseases have become a big threat to women’s health. The first sign for a uterine disease may be bleeding between periods or after sex. Some pathological states include: endometritis, endometriosis, uterine polyp, uterine fibroid, prolapse of the uterus, pyometra, uterine malformations, and Asherman’s syndrome. Abortion, uterine cavity operations and infections may result in uterine disease. As a common group of female diseases, uterine diseases are of great attractions to researchers. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in the area of uterine diseases.

In this special issue, we invite front-line researchers and authors to submit original research and review articles that explore uterine diseases. Potential topics include, but are not limited to:

- Female reproductive organ
- Uterine malformations
- Endometritis
- Endometriosis
- Uterine fibroid
- Abortion
- Prolapse of the uterus

Authors should read over the journal’s Authors’ Guidelines carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal’s Paper Submission System.

Please kindly notice that the “Special Issue” under your manuscript title is supposed to be specified and the research field “Special Issue - Uterine Diseases” should be chosen during your submission.

According to the following timetable:

<table>
<thead>
<tr>
<th>Submission Deadline</th>
<th>January 2nd, 2014</th>
</tr>
</thead>
<tbody>
<tr>
<td>Publication Date</td>
<td>March 2014</td>
</tr>
</tbody>
</table>
