

Special Issue on Actinobacteria Research

Call for Papers

Actinobacteria is a phylum of Gram-positive bacteria with high guanine and cytosine content in their DNA. The G+C content of Actinobacteria can be as high as 70%, though some may have a low G+C content. **Actinobacteria** is one of the dominant bacterial phyla and contains one of the largest of bacterial genera, Streptomyces.

In this special issue, we intend to invite front-line researchers and authors to submit original researches and review articles on exploring **actinobacteria**. Potential topics include, but are not limited to:

- Morphology and structure research
- Growth and reproduction
- Microbial physiology
- Actinobacteria & Antibiotics
- Industrial production and application

Authors should read over the journal's [Authors' Guidelines](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal at [Paper Submission System](#).

Please kindly specify the “**Special Issue**” under your manuscript title. The research field “**Special Issue – Actinobacteria Research**” should be selected during your submission.

Special Issue timetable:

Submission Deadline	July 28th, 2015
Publication Date	September 2015
