

Special issue on Fatty Acids

Call for Papers

Fatty acids are a group of biologically active molecules, including saturated, monounsaturated, polyunsaturated and trans fatty acids, with varied lengths and nature of covalent bonds. Although fatty acids play a role, whether protective or detrimental, in a wide array of diseases, their effects on risks of cardiovascular disease, type 2 diabetes and metabolic syndrome have received the most attention in clinical nutrition. The debate is still ongoing, and controversies in findings still exist reporting both positive and negative contribution of fatty acids to the prevention and management of these diseases.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring **Fatty Acids**.

Authors should read over the journal's [Authors' Guidelines](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal [Paper Submission System](#).

Please kindly notice that the "**Special Issue**" under your manuscript title is supposed to be specified and the research field "*Special issue on- Fatty Acids*" should be chosen during your submission.

According to the following timetable:

Manuscript Due	July 10th, 2013
Publication Date	September 2013

Guest Editor

Dr. Dalia El Khoury

University of Toronto, Canada
