

Special issue on
New and Emerging Therapies for Osteoporosis

Call for Papers

The meaning of Osteoporosis is "porous bones". Osteoporosis is a disease of bones that leads to an increased risk of fracture. In osteoporosis, the bone mineral density (BMD) is reduced, bone microarchitecture deteriorates, and the amount and variety of proteins in bone are altered. Osteoporosis is defined by the World Health Organization (WHO) as a bone mineral density of 2.5 standard deviations or more below the mean peak bone mass (average of young, healthy adults) as measured by dual-energy X-ray absorptiometry.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring **New and Emerging Therapies for Osteoporosis**.

Authors should read over the journal's [Authors' Guidelines](#) carefully before submission, Prospective authors should submit an electronic copy of their complete manuscript through the journal [Paper Submission System](#).

Please kindly notice that the "**Special Issue**" under your manuscript title is supposed to be specified and the research field "*Special issue- New and Emerging Therapies for Osteoporosis*" should be chosen during your submission.

According to the following timetable:

Manuscript Due	May 15 th , 2013
Publication Date	July 2013

Guest Editor:

Prof. James J. Chou
Harvard Medical School, USA
