

## Special Issue on Advances in Analgesia Therapy Research

### Call for Papers

**Analgesia Therapy** was defined as a class of medical technology that can help alleviate human pain suffering from physical illness. Most analgesic therapy was based on various methods to inhibit nerve conduction process which will reduce the pain patients suffered. However, paralysis of the nervous system usually put the patients at risks. In recent years, to study how to use analgesic therapy to minimize the patient's pain while ensuring the safety and reliability of analgesic therapy is the focus of the current research in this area.

In this special issue, we are going to invite front-line researchers and authors to submit original research and review articles that explore **Analgesia Therapy**. Potential topics include, but are not limited to:

- Diagnosis of Pain causes
- Analgesic therapy methods and their Principle of pain killer
- Genetics of Chronic Pain
- Molecular correlates of Pain
- Neural paralysis Security
- Pathogenesis of Chronic Pain
- Pharmacology of analgesic therapy
- Psychology of analgesic therapy
- Novel pain killer and their precise dosage

Authors should read over the journal's [Author's Guidelines](#) carefully before submission, Prospective authors should submit an electronic copy of their complete manuscript through the journal [Paper Submission System](#).

Please kindly notice that the "**Special Issue**" under your manuscript title is supposed to be specified and the re-search field "**Special Issue- Advances in Analgesia Therapy Research**" should be chosen during your submission.

According to the following timetable:

Manuscript Due	September 5th, 2013
Publication Date	November 2013
