

Special Issue on Trauma Research

Call for Papers

Traumatology is a branch of medicine. It aimed at the study of wounds and injuries caused by accidents or violence to a person, and the surgical therapy and repair of the damage. Traumatology can bridge Behavioral Science and Medicine, in that the study of trauma, whether it be emotional or physical, can provide valuable assessment information about individual client functioning and disorder in terms of etiology of illness, and this information may be helpful in treatment planning. It is often considered a subset of surgery and in countries without the specialty of trauma surgery it is most often a sub-specialty to orthopedic surgery.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring **Trauma Research**.

Authors should read over the journal's [Authors' Guidelines](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal at [Paper Submission System](#).

Please kindly notice that the “**Special Issue**” under your manuscript title is supposed to be specified and the research field “**Special Issue - Trauma Research**” should be chosen during your submission.

According to the following timetable:

Submission Deadline	January 21st, 2014
Publication Date	March 2014

Guest Editor:

Dr. **Stuart (Sody) Abby Naimer**

Department of Family Medicine, Division of Health in the Community, University Center for Health Sciences, Ben-Gurion University of the Negev
