**Special Issue on Diet and Cancer**

**Call for Papers**

Dietary factors are recognized as having a significant effect on the risk of cancers. Some specific foods may help prevent or contribute to certain cancers. Studies have linked eating red or processed meat to an increased risk of breast cancer, colon cancer, prostate cancer, and pancreatic cancer, which may be partially explained by the presence of carcinogens in foods cooked at high temperatures. Dietary recommendations to prevent cancer typically include weight management and eating "mainly vegetables, fruit, whole grains and fish, and a reduced intake of red meat, animal fat, and refined sugar.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring **Diet and Cancer**. Potential topics include, but are not limited to:

- Carcinogen
- Alcohol and cancer
- Stomach cancer
- Pancreatic cancer
- Weight control
- Foods for cancer prevention
- Meat consumption and cancer risk

Authors should read over the journal’s [For Authors] carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal’s [Paper Submission System].

Please kindly specify the “**Special Issue**” under your manuscript title. The research field “**Special Issue - Diet and Cancer**” should be selected during your submission.

**Special Issue Timetable:**

<table>
<thead>
<tr>
<th>Submission Deadline</th>
<th>October 20th, 2017</th>
</tr>
</thead>
<tbody>
<tr>
<td>Publication Date</td>
<td>December 2017</td>
</tr>
</tbody>
</table>
