

Special Issue on Hydrology, Water Resources and Environmental Hazards

Call for Papers

Hydrology is the study of the movement, distribution, and quality of water on Earth and other planets, including the hydrologic cycle, water resources and environmental watershed sustainability. A practitioner of hydrology is a hydrologist, working within the fields of earth or environmental science, physical geography, geology or civil and environmental engineering.

Hydrology is subdivided into surface hydrology and marine hydrology. Domains of hydrology include hydrometeorology, surface hydrology, hydrogeology, drainage basin management and water quality, where water plays the central role. Oceanography and meteorology are not included because water is only one of many important aspects within those fields. Hydrological research can inform environmental engineering, policy and planning.

In this special issue, we invite front-line researchers and authors to submit original research and review articles that explore **Hydrology, Water Resources and Environmental Hazards**.

Authors should read over the journal's [Authors' Guidelines](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly notice that the "**Special Issue**" under your manuscript title is supposed to be specified and the research field "**Special Issue - Hydrology, Water Resources and Environmental Hazards**" should be chosen during your submission.

According to the following timetable:

Submission Deadline	October 23rd, 2013
Publication Date	December 2013
