

Special Issue on Gene Therapy

Call for Papers

Gene Therapy has emerged as a promising method to cure genetic diseases or at least improve the status of patients. If the idea of replacing an “abnormal” dysfunctional gene by its “normal” functional counterpart may look simple, technical difficulties are often encountered such as the stable and targeted insertion of the therapeutic gene into the host genome.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring **Gene Therapy**.

Authors should read over the journal’s [Author Guidelines](#) carefully before submission, Prospective authors should submit an electronic copy of their complete manuscript through the journal [Paper Submission System](#).

Please kindly notice that the “**Special Issue**” under your manuscript title is supposed to be specified and the research field “*Special Issue- Gene Therapy*” should be chosen during your submission.

According to the following timetable:

Manuscript Due	March 27th, 2013
Publication Date	May 2013

Editor-in-Chief

Prof. Benoit Chénais
Université du Maine, France
