

Special Issue on Noncoding DNA and RNA

Call for Papers

In genomics and related disciplines, **noncoding DNA** sequences are components of an organism's DNA that do not encode protein sequences. Some noncoding DNA is transcribed into functional non-coding RNA molecules, while others are not transcribed or give rise to RNA transcripts of unknown function. Non-coding RNAs include highly abundant and functionally important RNAs such as transfer RNAs (tRNAs), ribosomal RNAs (rRNAs) and so on. As both **noncoding DNA and RNA** play an important role in our body function, further study on them is of great attractions to researchers.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring **noncoding DNA and RNA**. Potential topics include, but are not limited to:

- Noncoding DNA
- Non-coding RNA
- Function and application
- Disease and ncRNAs

Authors should read over the journal's [Authors' Guidelines](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly notice that the “**Special Issue**” under your manuscript title is supposed to be specified and the research field “**Special Issue - Noncoding DNA and RNA**” should be chosen during your submission.

According to the following timetable:

Submission Deadline	May 28th, 2015
Publication Date	July 2015

Guest Editor:
