

## Special Issue on Separation, Purification and Structure

### Identification of Polysaccharides

#### Call for Papers

**Polysaccharides** are polymeric carbohydrate molecules composed of long chains of monosaccharide units bound together by glycosidic linkages and on hydrolysis give the constituent monosaccharides or oligosaccharides. **Polysaccharides** are an important class of biological polymers.

In this special issue, we intend to invite front-line researchers and authors to submit original researches and review articles on exploring **separation, purification and structure identification of polysaccharides**. Potential topics include, but are not limited to:

- Plant polysaccharides and fungal polysaccharides
- Physical and chemical properties of polysaccharides
- Biological functions of polysaccharides
- Separation, purification, concentration techniques
- Molecular structure identification
- Clinical application of polysaccharides

Authors should read over the journal's [Authors' Guidelines](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal at [Paper Submission System](#).

Please kindly specify the “**Special Issue**” under your manuscript title. The research field “**Special Issue – Separation, Purification and Structure Identification of Polysaccharides**” should be selected during your submission.

Special Issue timetable:

Submission Deadline	August 25th, 2015
Publication Date	October 2015
