

## Special Issue on Sequencing Approaches in Biology

### Call for Papers

In genetics and biochemistry, **sequencing** means to determine the primary structure of an unbranched biopolymer. Sequencing results in a symbolic linear depiction known as a sequence which succinctly summarizes much of the atomic-level structure of the sequenced molecule. DNA sequencing is the process of determining the nucleotide order of a given DNA fragment.

In this special issue, we intend to invite front-line researchers and authors to submit original researches and review articles on exploring **sequencing approaches in biology**. Potential topics include, but are not limited to:

- DNA sequencing
- RNA sequencing
- MicroRNA sequencing
- Exome sequencing
- Protein sequencing
- Polysaccharide sequencing

Authors should read over the journal's [Authors' Guidelines](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal at [Paper Submission System](#).

Please kindly specify the “**Special Issue**” under your manuscript title. The research field “**Special Issue – Sequencing Approaches in Biology**” should be selected during your submission.

Special Issue timetable:

Submission Deadline	May 26th, 2016
Publication Date	July 2016
