

Special Issue on Genetic Variation and Human Health

Call for Papers

In the 21st century, one of the major scientific challenges is to clarify and understand the significance of **genetic variations** in human health and diseases. The studies in this field will be greatly facilitated by deep understanding of the mechanisms by which mutations exert their dominant effects on human health. Moreover, understanding the effects of environmental factors and genetic variations including their interaction on human health are of the great challenging.

In this special issue, we intend to invite front-line researchers and authors to submit original researches and review articles on exploring **Genetic Variation and Human Health**. Potential topics include, but are not limited to:

- Gene mutation
- Gene recombination
- Chromosomal variation
- Heritable variation
- Diseases and genetic variations
- Environmental factors and genetic variations
- The effects of genetic variation on human health

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly notice that the “**Special Issue**” under your manuscript title is supposed to be specified and the research field “**Special Issue – Genetic Variation and Human Health**” should be chosen during your submission.

According to the following timetable:

Submission Deadline	December 27th, 2017
Publication Date	February 2018
