Special Issue on Meteorological Disasters

Call for Papers

Meteorological disasters are caused by extreme weather. This special issue deals with the study of natural hazards of hydro-meteorological origin and the mitigation of their effects. Among these hazards – the results of natural processes or phenomena of atmospheric, hydrological or oceanographic nature - are floods, tropical cyclones, drought and desertification. Due to global climate change these natural hazards are expected to rise. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in this area of **meteorological disasters**.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring **meteorological disasters**. In this special issue, potential topics include, but are not limited to:

- Droughts and floods
- Hurricanes and tropical storms
- A tropical cyclone
- The typhoon
- Lightning and wildfires
- Heat waves and cold waves
- The high temperature
- Mitigation measures of meteorological disasters

Authors should read over the journal's <u>For Authors</u> carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's <u>Paper Submission System</u>.

Please kindly notice that the "**Special Issue**" under your manuscript title is supposed to be specified and the research field "**Special Issue** - *Meteorological Disasters*" should be chosen during your submission.

According to the following timetable:

Submission Deadline	June 29th, 2019
Publication Date	August 2019

Guest Editor:

Prof. Shaocai Yu, North Carolina State University, USA
