### **Special Issue on Atmospheric Physics**

#### **Call for Papers**

Atmospheric physics is a branch of meteorology and is related to climatology. Scientists use mathematical and physical models to study and understand Earth's atmosphere and its weather systems. For example, they apply the theory of fluid dynamics to atmospheric tides. They also use data collected by satellites, meteorological radar, and research aircraft to explore the layers of the atmosphere, weather systems, and climatic phenomena like thunderstorms. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in this area of **atmospheric physics**.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring **atmospheric physics**. In this special issue, potential topics include, but are not limited to:

- Synoptic meteorology
- Atmospheric dynamics and general circulation
- Weather systems in specific regions
- Numerical modeling and forecasting
- Physical and chemical processes in the atmosphere
- Atmospheric turbulence and transport processes
- Mathematical and statistical techniques applied to meteorological data

Authors should read over the journal's <u>For Authors</u> carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's <u>Paper Submission System</u>.

Please kindly notice that the "**Special Issue**" under your manuscript title is supposed to be specified and the research field "**Special Issue** - *Atmospheric Physics*" should be chosen during your submission.

According to the following timetable:

Submission Deadline	December 10th, 2021
Publication Date	February 2022

#### **Guest Editor:**
