Special Issue on Research on Climatology

Call for Papers

Climatology is the study of climate, which includes long-term patterns of temperature, precipitation, and other atmospheric conditions in a particular region or across the globe. Climatologists analyze historical data, satellite images, and computer models to understand how the climate is changing over time, and the potential impacts of these changes on ecosystems, weather patterns, and human societies. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in this area of **Research on Climatology**.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring **Research on Climatology**. In this special issue, potential topics include, but are not limited to:

- Atmospheric deep convection
- Extra-tropical cyclones
- Atmospheric thermodynamics
- Atmospheric circulation and atmospheric turbulence
- Numerical experiment of atmospheric motion
- Ensemble prediction and algorithmic parameter estimation techniques
- Climate dynamics and the implications posed for global change
- Future changes to our weather and climate on global and regional scales

Authors should read over the journal's <u>For Authors</u> carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's <u>Paper Submission System.</u>

Please kindly notice that the "**Special Issue**" under your manuscript title is supposed to be specified and the research field "**Special Issue** – **Research on Climatology**" should be chosen during your submission.

According to the following timetable:

Submission Deadline	June 7th, 2024
Publication Date	August 2024
