

Special Issue on Metal Analysis

Call for Papers

Metal Analysis is considered as a detection method which determines metal elements from metal or nonmetal materials with quantitative and qualitative test. Demand for metals is closely linked to economic growth and technological advance. It is widely used in many industries such as metallurgy, casting, machinery and chemistry. Metal analysis includes chemical analysis of metal, mechanical testing of metal, metallographic testing of metal and failure analysis of metal, etc. This special issue will be focused on studying different kinds of **metal analysis** and their applications.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring **metal analysis**. Potential topics include, but are not limited to:

- Equipment for metal analysis
- Metal analysis in metal alloy
- Determination of metal element and component
- Technology of trace metal analysis
- Chemical and physical analysis of metal material
- Application in metal recovery

Authors should read over the journal's [Authors' Guidelines](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly notice that the “**Special Issue**” under your manuscript title is supposed to be specified and the research field “**Special Issue - Metal Analysis**” should be chosen during your submission.

According to the following timetable:

Submission Deadline	October 23rd, 2014
Publication Date	December 2014
