

Special Issue on Capillary Electrophoresis

Call for Papers

Capillary electrophoresis (CE) is a family of electrokinetic separation methods performed in submillimeter diameter capillaries and in micro- and nanofluidic channels. Capillary electrophoresis is a high efficiency separation technique available for the analysis of both large and small molecules.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring **Capillary Electrophoresis**. Potential topics include, but are not limited to:

- Types of capillary electrophoresis
- Multiplexed detection in capillary electrophoresis
- Capillary electrophoresis - mass spectrometry
- Separation mechanisms
- Applications of capillary electrophoresis
- Electroosmotic flow (EOF) and control of EOF
- Design and optimization of capillary electrophoresis processes

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly specify the “**Special Issue**” under your manuscript title. The research field “**Special Issue - Capillary Electrophoresis**” should be selected during your submission.

Special Issue Timetable:

Submission Deadline	September 10th, 2016
Publication Date	November 2016
