

Special Issue on Spectral Analysis Research

Call for Papers

Spectral analysis is an important research tool for deciphering information in various fields of science and technology. Spectral analysis is based on the Fourier theorem which states that any waveform can be decomposed into a sum of sine waves at different frequencies with different amplitudes and different phase relationships. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in this area of **Spectral Analysis Research**.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring **Spectral Analysis Research**. In this special issue, potential topics include, but are not limited to:

- Atomic emission spectrometry
- Atomic absorption spectrometry
- UV-VIS absorption spectrometry
- Infrared spectroscopy
- Molecular spectroscopy
- Applications of spectral analysis

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly specify the “**Special Issue**” under your manuscript title. The research field “**Special Issue - Spectral Analysis Research**” should be selected during your submission.

Special Issue timetable:

Submission Deadline	March 27th, 2024
Publication Date	May 2024
