

Advances in Pollen Research

Call for Papers

The study of Pollen is called palynology and is highly useful in paleoecology, archeology, and forensics. Palynology is an interdisciplinary science and is a branch of earth science and biological science, particularly plant science. Stratigraphical palynology is a branch of micropalaeontology and paleobotany which studies fossil palynomorphs from the Precambrian to the Holocene. It is the science that studies contemporary and fossil palynomorphs, including pollen, spores, orbicules, dinocysts, acritarchs, chitinozoans and scolecodonts, together with particulate organic matter (POM) and kerogen found in sedimentary rocks and sediments. Palynology does not include diatoms, foraminiferans or other organisms with siliceous or calcareous exoskeletons.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring **Pollen Research**.

Authors should read over the journal's [Author Guidelines](#) carefully before submission, Prospective authors should submit an electronic copy of their complete manuscript through the journal [Paper Submission System](#).

Please kindly notice that the “**Special Issue**” under your manuscript title is supposed to be specified and the research field “**Special Issue- Pollen Research**” should be chosen during your submission.

According to the following timetable:

Manuscript Due	May 15th, 2013
Publication Date	July, 2013

Guest Editor

Dr. Sukumar Saha

US Department of Agriculture, USA
