

Special Issue on Plant Physiology Research

Call for Papers

Plant physiology is one of the most important branches of botany, and it includes the study of all the internal activities of plants, such as photosynthesis, respiration, plant hormone functions. There are five major areas of investigation in plant physiology: the study of phytochemistry, the study of biological and chemical processes of individual plant cells, the study of the interactions between cells, tissues, and organs within a plant, the study the ways that plants control or regulate internal functions and the study of how plants respond to conditions and variation in the environment. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in the area of **Plant Physiology Research**.

In this special issue, we are going to invite front-line researchers and authors to submit original research and review articles that explore **Plant Physiology Research**.

Authors should read over the journal's [Authors' Guidelines](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal at [Paper Submission System](#).

Please kindly notice that the “**Special Issue**” under your manuscript title is supposed to be specified and the research field “**Special Issue - Plant Physiology Research**” should be chosen during your submission.

According to the following timetable:

Submission Deadline	November 26th, 2013
Publication Date	January 2014
