

## **Special Issue on Arabidopsis**

## **Call for Papers**

Arabidopsis is a genus in the family Brassicaceae. It contains many species in this genus. One of the most important species was Arabidopsis thaliana. Of all the known species of flowering plants, Arabidopsis thaliana stands alone as the most thoroughly studied, and it was also the first plant to have its entire genome sequenced. Changes in Arabidopsis thaliana are easily observed, making it a very useful model organism in studies of many fields, such as genetics, molecular biology, developmental biology and cell biology.

The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in the area of **arabidopsis**. we intend to invite front-line researchers and authors to submit original researches and review articles on exploring **arabidopsis**.

Authors should read over the journal's <u>Authors' Guidelines</u> carefully before submission, Prospective authors should submit an electronic copy of their complete manuscript through the journal <u>Paper Submission System</u>.

Please kindly notice that the "**Special Issue**" under your manuscript title is supposed to be specified and the research field "**Special Issue** - *Arabidopsis*" should be chosen during your submission.

According to the following timetable:

Manuscript Due	January 15th, 2014
Publication Date	March, 2014

**Guest Editor:** Dr. **Sukumar Saha** US Department of Agriculture, USA
