

Special Issue on Tropical Vegetation

Call for Papers

Tropical Vegetation is a general term referring to vegetation in tropical latitudes. Tropical ecosystems harbor rich biodiversity, and are often coupled with high species endemism. Rainforests are home to half of all the living animal and plant species on the planet and roughly two-thirds of all flowering plants can be found in rainforests. Therefore, the research on **tropical vegetation** may be of great significance.

This special issue aims at providing a platform for scientists and academics all over the world to promote, share, and discuss various new issues and developments in the area of **tropical vegetation**. Potential topics included, but are not limited to:

- Ecology of tropical vegetation
- Phytochemistry of tropical vegetation
- Phytopathology of tropical vegetation
- Phylogenetics and evolution of tropical vegetation
- Plant genetics of tropical vegetation
- Dendrochronology of tropical vegetation
- Physiology of tropical vegetation
- Applications of biotechnology in tropical vegetation
- Ethnobotanical importance of tropical vegetation

Authors should read over the journal's [Authors' Guidelines](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly notice that the “**Special Issue**” under your manuscript title is supposed to be specified and the research field “**Special Issue - Tropical Vegetation**” should be chosen during your submission.

According to the following timetable:

Submission Deadline	March 4th, 2014
Publication Date	May 2014

Guest Editor:

Dr. Christopher J. Koroneos

National Technical University of Athens, Greece
