

Special Issue on Gymnosperms

Call for Papers

The **gymnosperms** are a group of plant which produces seeds. There is no ovary wall outside the ovule, and the seeds of these plants are bare. Gymnosperm and angiosperms make up the group of spermatophyte, and the two differ in flows, seeds and fruits. So far, the conifers, the dicotyledons, and the Gnetophytes are the largest groups of living gymnosperms. As one of the most important categories of plant, **gymnosperms** have great attraction for researchers.

This special issue aims at providing a platform for scientists and academics all over the world to promote, share, and discuss various new issues and developments in the area of **gymnosperms**. Potential topics included, but are not limited to:

- Morphology of gymnosperms
- Genetics of gymnosperms
- Biochemistry of gymnosperms
- Propagation of gymnosperms
- Somatic embryogenesis of gymnosperms
- Nutrients in gymnosperms
- Gametophyte of gymnosperms

Authors should read over the journal's [Authors' Guidelines](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly notice that the “**Special Issue**” under your manuscript title is supposed to be specified and the research field “**Special Issue - Gymnosperms**” should be chosen during your submission.

According to the following timetable:

Submission Deadline	July 17th, 2014
Publication Date	August 2014
