## Special Issue on Plant DNA

### Call for Papers

DNA is the hereditary or genetic material, present in all cells, that carries information for the structure and function of living things. In the plant kingdom, DNA, or deoxyribonucleic acid, is contained within the membrane-bound cell structures of the nucleus, mitochondria, and chloroplasts. DNA has several properties that are unique among chemical molecules.

In this special issue, we intend to invite front-line researchers and authors to submit original researches and review articles on exploring **plant DNA**. Potential topics include, but are not limited to:

- Self-replication
- mRNA
- Protein synthesis
- Mitochondrial and chloroplastic DNA
- Plant DNA extraction
- Genetically modified plants

Authors should read over the journal's [Authors' Guidelines](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal at [Paper Submission System](#).

Please kindly specify the “**Special Issue**” under your manuscript title. The research field “**Special Issue – Plant DNA**” should be selected during your submission.

Special Issue timetable:

Submission Deadline	May 18th, 2017
Publication Date	July 2017
