
Special Issue on Plant Abiotic Stress

Call for Papers

Abiotic Stress cause changes in soil-plant-atmosphere continuum and is responsible for reduced yield in several major crops. Therefore, the subject of abiotic stress response in plants - metabolism, productivity and sustainability - is gaining considerable significance in the contemporary world. Abiotic stress is an integral part of “climate change,” a complex phenomenon with a wide range of unpredictable impacts on the environment.

In this special issue, we intend to invite front-line researchers and authors to submit original researches and review articles on exploring **plant abiotic stress**. Potential topics include, but are not limited to:

- The impact of drought stress on plant physiology
- Metabolism to productivity
- Responses to salinity stress
- Responses to limited water environments
- Responses to high temperature
- Response to herbicides
- Genomic analysis

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal at [Paper Submission System](#).

Please kindly specify the “**Special Issue**” under your manuscript title. The research field “**Special Issue – Plant Abiotic Stress**” should be selected during your submission.

Special Issue timetable:

Submission Deadline	August 18th, 2017
Publication Date	October 2017
