
Special Issue on Tea Research

Call for Papers

Tea is an aromatic beverage commonly prepared by pouring hot or boiling water over cured leaves of the *Camellia sinensis*, an evergreen shrub native to Asia. The astringency in tea can be attributed to the presence of polyphenols. These are the most abundant compounds in tea leaves, making up 30-40% of their composition. Tea also contains small amounts of theobromine and theophylline, which are stimulants, and xanthines similar to caffeine.

In this special issue, we intend to invite front-line researchers and authors to submit original researches and review articles on exploring **tea research**. Potential topics include, but are not limited to:

- Cultivation and harvesting
- Chemical composition
- Processing and classification
- Preparation
- Tea culture
- Economics
- Packaging and storage

Authors should read over the journal's [Authors' Guidelines](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal at [Paper Submission System](#).

Please kindly specify the “**Special Issue**” under your manuscript title. The research field “**Special Issue – Tea Research**” should be selected during your submission.

Special Issue timetable:

Submission Deadline	May 26th, 2017
Publication Date	June 2017
