

Special Issue on Operator Theory and Applications

Call for Papers

Operator theory is refers to a diverse area that has grown out of linear algebra and complex analysis, and is usually described as the branch of functional analysis that deals with bounded linear operators and their properties. The goal of this Special Issue is to provide a platform for scientists worldwide to promote, share, and discuss various new issues and developments in the area of **operator theory and applications**.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring **operator theory and applications**. Potential topics include, but are not limited to:

- Bounded linear operators
- Banach algebras and spectral theory
- Analytic function spaces
- Operators on finite dimensional spaces
- Bounded and unbounded operators
- Self adjoint operators
- Applications

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly specify the “**Special Issue**” under your manuscript title. The research field “**Special Issue - Operator Theory and Applications**” should be selected during your submission.

Special Issue timetable:

Submission Deadline	November 30th, 2016
Publication Date	January 2017
