

Special Issue on Functions of Real Variable

Call for Papers

The theory of functions of real variable is from a largely classical point of view. It is a function that takes real number as the independent variable. The theory of functions of real variable is study the classification and structure of the real variable function. The goal of this Special Issue is to provide a platform for scientists worldwide to promote, share, and discuss various new issues and developments in the area of **functions of real variable**.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring **functions of real variable**. Potential topics include, but are not limited to:

- Metric spaces
- Hilbert spaces and compact operators
- Fourier transform
- Measure theory
- Lebesgue integral
- Spectral theorem
- Applications

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly specify the “**Special Issue**” under your manuscript title. The research field “**Special Issue - Functions of Real Variable**” should be selected during your submission.

Special Issue timetable:

Submission Deadline	February 9th, 2017
Publication Date	April 2017
