Special Issue on Aspergillus

Call for Papers

Aspergillus is a genus consisting of several hundred mold species found in the world. Aspergillus species are highly aerobic and are found in almost all oxygen-rich environments. They commonly grow as molds on the surface of a substrate as a result of the high oxygen tension. Some species can cause infection in humans while some species are important in commercial microbial fermentations. As species of **Aspergillus** has great medical and commercial importance, further study on **Aspergillus** is significant and valuable.

In this special issue, we intend to invite front-line researchers and authors to submit original researches and review articles on exploring **Aspergillus**. Potential topics include, but are not limited to:

- Characteristics of Aspergillus
- Growth and distribution
- Commercial importance
- Pathogens
- Aspergillosis
- Mycotoxin

Authors should read over the journal's <u>Authors' Guidelines</u> carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's <u>Paper Submission System</u>.

Please kindly notice that the "**Special Issue**" under your manuscript title is supposed to be specified and the research field "**Special Issue** –*Aspergillus*" should be chosen during your submission.

According to the following timetable:

Submission Deadline	March 19th, 2015
Publication Date	May 2015

Guest Editor:

ISSN Online: 2165-3410
