## Special Issue on Fermentation

### Call for Papers

**Fermentation** is a metabolic process that converts sugar to acids, gases, or alcohol. It occurs in yeast and bacteria, and also in oxygen-starved muscle cells, as in the case of lactic acid fermentation. Fermentation is also used more broadly to refer to the bulk growth of microorganisms on a growth medium, often with the goal of producing a specific chemical product.

In this special issue, we intend to invite front-line researchers and authors to submit original researches and review articles on exploring **fermentation**. Potential topics include, but are not limited to:

- Ethanol fermentation
- Lactic acid fermentation
- Aerobic respiration
- Hydrogen gas production in fermentation
- Methane gas production in fermentation
- Human use

Authors should read over the journal's [Authors' Guidelines](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal at [Paper Submission System](#).

Please kindly specify the “**Special Issue**” under your manuscript title. The research field “**Special Issue – Fermentation**” should be selected during your submission.

Special Issue timetable:

Submission Deadline	March 30th, 2017
Publication Date	May 2017
