

Special Issue on
Applied and Environmental Microbiology
Call for Papers

"Applied and Environmental Microbiology" is a field that explores the roles, functions, and applications of microorganisms in environmental contexts and biotechnological processes. It investigates how bacteria, viruses, fungi, and protists interact with their environments, impact ecosystems, and can be harnessed for environmental remediation, waste treatment, sustainable agriculture, and the production of biofuels, pharmaceuticals, and other valuable products. This multidisciplinary approach aims to solve environmental challenges and promote a sustainable future.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on **Applied and Environmental Microbiology**. Potential topics include, but are not limited to:

- Microbial ecology
- Environmental bioremediation
- Industrial microbiology
- Water and wastewater treatment
- Pollution microbiology
- Soil microbiology
- Food microbiology
- Bioenergy and biofuels
- Marine microbiology
- Extreme microbiology
- Antimicrobial resistance
- Environmental biotechnology
- Microbial processes for environmental sustainability

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly notice that the "**Special Issue**" under your manuscript title is supposed to be specified and the research field "**Special Issue – Applied and Environmental Microbiology**" should be chosen during your submission.

According to the following timetable:

Submission Deadline	June 14th, 2024
Publication Date	August 2024
