

Special Issue on Clean Energy

Call for Papers

While impressive progress has been made in developing clean energy technologies in recent years, the success stories are overshadowed by surging demand for fossil fuels, which are outstripping deployment of clean energy technologies. Coal has met 47% of the global new electricity demand since the turn of the century, eclipsing clean energy efforts made over the same period of time, which include improved implementation of energy efficiency measures and rapid growth in the use of renewable energy sources. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in the area of **clean energy**.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring **clean energy**. In this special issue, potential topics include, but are not limited to:

- Ocean energy
- Solar energy
- Wind energy
- Hydrogen energy
- Bioenergy
- Clean energy technologies

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly notice that the “**Special Issue**” under your manuscript title is supposed to be specified and the research field “**Special Issue - Clean Energy**” should be chosen during your submission.

According to the following timetable:

Submission Deadline	January 31st, 2019
Publication Date	March 2019
