

Special Issue on Application of Geographic Information System

Call for Papers

A geographic information system is a system designed to capture, store, manipulate, analyze, manage, and present all types of spatial or geographical data. GIS is a technological field that incorporates geographical features with tabular data in order to map, analyze, and assess real-world problems. The key word to this technology is Geography – this means that some portion of the data is spatial. In other words, data that is in some way referenced to locations on the earth. Coupled with this data is usually tabular data known as attribute data.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring **application of geographic information system**. In this special issue, potential topics include, but are not limited to:

- GIS techniques and technology
- Spatial analysis with geographical information system
- Geostatistics
- Application of GIS in environment
- Application of GIS in geology

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly notice that the “**Special Issue**” under your manuscript title is supposed to be specified and the research field “**Special Issue - Application of Geographic Information System**” should be chosen during your submission.

According to the following timetable:

Submission Deadline	September 30th, 2016
Publication Date	November 2016
