

Special Issue on Geochemistry

Call for Papers

Geochemistry is the branch of Earth Science that applies chemical principles to deepen an understanding of the Earth system and systems of other planets. Geochemists consider Earth composed of discrete spheres-rocks, fluids, gases and biology-that exchange matter and energy over a range of time scales. An appreciation for rates of reactions and the range of physical conditions responsible for the chemical expressions of each sphere provides the framework to study the co-evolution of the solid Earth, its oceans, atmosphere, biosphere, and climate. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in the area of **geochemistry**.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring **geochemistry**. In this special issue, potential topics include, but are not limited to:

- Geochemistry of element
- Organic geochemistry
- Astrochemistry
- Environmental geochemistry
- Geochemistry of mineral deposits
- Regional geochemistry

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly notice that the “**Special Issue**” under your manuscript title is supposed to be specified and the research field “**Special Issue - Geochemistry**” should be chosen during your submission.

According to the following timetable:

Submission Deadline	January 10th, 2019
Publication Date	March 2019

Guest Editor:

Prof. Valentine Udoh James, Fluorotronics Inc., USA
