

## Special Issue on Soil Environmental

### Call for Papers

Soil is the link between the air, water, rocks, and organisms, and is responsible for many different functions in the natural world that we call ecosystem services. These soil functions include: air quality and composition, temperature regulation, carbon and nutrient cycling, water cycling and quality, natural "waste" (decomposition) treatment and recycling, and habitat for most living things and their food. We could not survive without these soil functions. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in the area of **soil environmental**.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring **soil environmental**. In this special issue, potential topics include, but are not limited to:

- Soil contamination with metals and pesticide
- Remediation of contaminated soils
- Soil fertility, soil chemistry and soil mineralogy
- Soil microbiology and biochemistry
- Carbon and Nutrient cycling
- Conservation of soil environment

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly notice that the "**Special Issue**" under your manuscript title is supposed to be specified and the research field "**Special Issue - Soil Environmental**" should be chosen during your submission.

According to the following timetable:

Submission Deadline	March 7th, 2019
Publication Date	May 2019
