

Special Issue on Hydrogeology and Water Cycle

Call for Papers

Water cycle, also called hydrologic cycle, cycle that involves the continuous circulation of water in the Earth-atmosphere system. Of the many processes involved in the water cycle, the most important are evaporation, transpiration, condensation, precipitation, and runoff. Although the total amount of water within the cycle remains essentially constant, its distribution among the various processes is continually changing. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in the area of **hydrogeology and water cycle**.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring **hydrogeology and water cycle**. In this special issue, potential topics include, but are not limited to:

- Continuous circulation of water in the Earth-atmosphere system
- Evaporation, transpiration
- Condensation, precipitation, and runoff
- Surface water hydrology
- Ground water quality & analysis
- Hydrology modelling

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly notice that the “**Special Issue**” under your manuscript title is supposed to be specified and the research field “**Special Issue - Hydrogeology and Water Cycle**” should be chosen during your submission.

According to the following timetable:

Submission Deadline	June 28th, 2019
Publication Date	August 2019

Guest Editor:

Prof. Valentine Udoh James, Fluorotronics Inc., USA
