

Special Issue on Soil Environmental

Call for Papers

Soils are the environment in which seeds grow. They provide heat, nutrients, and water that are available for use to nurture plants to maturity. These plants form together with other plants and organisms to create ecosystems. Ecosystems depend on the soil, and soils can help determine where ecosystems are located (check out the Around the World page for more examples.) These plants then provide valuable habitat and food sources for animals, bacteria, and other things. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in the area of **soil environmental**.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring **soil environmental**. In this special issue, potential topics include, but are not limited to:

- Soil contamination with metals and pesticide
- Remediation of contaminated soils
- Soil fertility, soil chemistry and soil mineralogy
- Soil microbiology and biochemistry
- Carbon and nutrient cycling
- Conservation of soil environment
- Soil sustainability
- Carbon and nutrient cycling

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly notice that the “**Special Issue**” under your manuscript title is supposed to be specified and the research field “**Special Issue - Soil Environmental**” should be chosen during your submission.

According to the following timetable:

Submission Deadline	June 30th, 2023
Publication Date	August 2023
